BRUT-83 Update UI Theme	5		
BRUT-86 User Profile Images	5		

During this sprint, we planned bi-weekly meetings to ensure implementation of all stories were on track.

During planning for sprint 4, we decided to take on the tickets that would provide the most value. Adding company users has been requested on the project overview, and also it was provided as feedback during the sprint 1 demo. We also decided to add a heavier integration with conferences. We also added BRUT-83 to our sprint, which is not a story but rather a task that has been in the back of our minds during several demos in past sprints.

During sprint 4, a lot of us had conflicting schedules due to other courses, and we fell a bit behind on our schedule. This taught us that communication of our personal schedules is important. As our team leverages each other as our main strength, this sprint we learned that as a team we have to develop new strengths so that we can depend on ourselves.
